California Regional Water Quality Control Board
San Francisco Bay Region
Attn: T. Berkins
1111 Jackson Street, Room 6040
Oakland, CA 94607

Dear Mr. Berkins:

On behalf of the Naval Air Station (NAS), Moffett Field, we are submitting as enclosures (1) and (2) the revised Sampling Plan and Quality Assurance Project Plan (QUAPP) for the NAS Moffett Field remedial investigation. These documents have been revised based upon correspondence, discussions, and meetings with you, the Environmental Protection Agency, and other involved regulatory agencies. It has been our intent to coordinate with you to fulfill the requirements of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) as amended by the Superfund Amendments and Reauthorization Act (SARA). By this submission of the Sampling Plan and QUAPP, it is our understanding that we have satisfied a portion of the documentation required for a Remedial Investigation/Feasibility Study (RI/FS) for an National Priority List (NPL) site. As we would like to implement the Sampling Plan as soon as possible, please solicit and consolidate comments from the involved regulatory agencies and provide the comments to this Command by August 14, 1987. In a phone conversation with me on July 21, 1987, you indicated that your review comments could be provided within a week of your receipt of the documents. An expeditious review by all parties would be greatly appreciated.

Two comments regarding the revised Sampling Plan must be made. One comment is that the name of Site 5 as used throughout the Sampling Plan should have remained "Fuel Farm French Drains" as previously used, rather than "Fuel Farms." Please make note of this change. Secondly, during the finalization of this revision of the Sampling Plan, a report was issued titled "Final Report, Naval Air Station, Moffett Field, Tank Testing Study" which provided limited additional information on underground tanks described in Table 2-3 of the Sampling Plan. Any significant additional information derived from this report will be included in a future amendment to the Sampling Plan. It should be noted that tanks in addition to those indicated for closure in Table 2-3 were recommended by this report for closure: Tanks 2, 14, 43, and 53.

As discussed in our July 21, 1987 phone conversation, we would also like to meet with you, the Environmental Protection Agency, and the other involved regulatory agencies in the near future to obtain guidance regarding further actions required to fulfill and be consistent with the requirements of CERCLA as amended by SARA for an NPL site. We will contact you regarding a mutually convenient time for such a meeting.
